

We facilitate knowledge exchange about wildland fire science

The federal Joint Fire Science Program supports 15 regional Fire Science Exchanges to provide the most relevant, up-to-date wildland fire science information to federal, tribal, state, local, and private stakeholders within ecologically similar regions.

We bring fire managers, practitioners and scientists together to exchange local needs and expertise to address current fire management challenges.

FIRE SCIENCE EXCHANGE NETWORK

Events and products

Each exchange continually assesses regional stakeholder needs to facilitate wildland fire science application on the ground:

- Field trips and tours
- Demonstration sites
- Workshops and conferences
- Networks of experts
- Webinars and training
- Research syntheses and briefs
- E-newsletters, websites, social media
- Regionally focused databases

We value your participation and ideas

Learn about exchange activities in your area. Visit the network page at **FIRE**SCIENCE.GOV.
